Avoid missed opportunities.

voice  
services

### Voice mail

- voice mail to email
- voice mail by phone
- voice mail by web portal

### Hosted PBX

- auto attendant
- call forwarding
- find me/follow me

Envision a central office with no physical location. Imagine talking to customers at home or on the road without giving out a residential or cell phone number. Picture listening to voice mails off of the computer. Achieve all this and more by subscribing to Innoport! Sign up and obtain a personal, virtual telephone number with enhanced voice mail and PBX capabilities for universal access.

### Omnipresent

**eVoicemail = convenience**

Record a personal greeting for your voice mailbox and retrieve messages by phone or via email or on the web as digital audio files in WAVE format. Innoport lets you accept simultaneous calls

to avoid busy signals and requires neither phone lines nor software.

### No equipment PBX solution

Innoport offers an affordable, enterprise-level office telephone system for any size business. Whether you require a voice mail system or a call center solution, you can create an auto attendant with separate business and after-hours greetings for transferring callers to different extensions. Find me/follow me even lets you route calls to travelling professionals or customer care agents so that calls can be picked up from anywhere. Forward calls to up to 5 phone numbers which ring in sequence with unanswered calls returning to your Innoport voice mailbox for access by phone or email.

### Custom Voice Applications

Innoport incorporates automated speech recognition (ASR) and text-to-speech (TTS) to build flexible interactive voice response (IVR) systems which meet your needs. Potential telephone applications include automated information retrieval, outbound notification systems, on-demand message routing and survey questionnaires. We can even help develop automated transcription solutions through speech-to-text.
